Dear Genius Match team,

I'm writing about the AI Platform / AI Engineering Specialist role. AI-driven assessment for education is a domain I've worked in directly, so I wanted to reach out.

Why this role fits. Building a Resume Matcher with tRPC, NLP, and Vertex AI (24k+ reads) covers turning unstructured documents into structured, scored output with an LLM — a candidate/resume-scoring pipeline conceptually close to an assessment tool like Geni. Separately, I built and grew an EdTech platform from scratch at my own research holding, including an AI-driven content pipeline. As the lead engineer (through my company, as the contracting entity) on a multi-tenant AI agent platform for a German AI SaaS company, I also built the Python/FastAPI backend for dynamic agents and was the top contributor (~45%) across both core repositories.

Practical note. I hold EU citizenship and am based in Berlin. I'm open to full-time, contract, or freelance arrangements — whatever fits how you're structuring the hire.

I'd welcome the chance to learn more about the end client and how the contract with Genius Match is structured — full name, engagement format, and whether the work is with the client's team directly.

Best regards,

Mykhailo Kapustin
