Dear Metamindz UK team,

I'm writing about the Senior Full Stack Engineer (BE focused) role you're hiring for on behalf of your client. I'd like to learn more about who the end client is before going deep on specifics, but the backend-focused full-stack profile is a strong match for my background.

Why this role fits. As the lead engineer (through my company, as the contracting entity) on a multi-tenant AI agent platform for a German AI SaaS company, I built the NestJS/React/PostgreSQL customer-facing layer (row-level security for tenant isolation) alongside a Python/FastAPI backend for dynamic agents and tool registries. I was the top contributor (~45%) across both core repositories and owned the release process from staging to production. Before that, I spent years as a backend/full-stack developer across companies where backend reliability, not just frontend polish, was the core job.

Practical note. I hold EU citizenship and am based in Berlin. I'm open to full-time, contract, or freelance arrangements — whatever fits how the client is structuring the hire.

I'd welcome the chance to learn more about the end client and the specific project before going further.

Best regards,

Mykhailo Kapustin
