Dear OneTablet team,

I'm writing about the Senior Fullstack Engineer role on Sous Chef. Naming agents, MCP servers, and autonomous workflows explicitly in a fullstack job posting is rare — most postings talk about "AI features," not the actual protocol-level architecture — so I wanted to reach out directly.

Why this role fits. Building AI Agent Infrastructure covers exactly this: the path from ad-hoc tool wiring to agents as autonomous services communicating through open standards like MCP and A2A — the same AgentOps maturity curve your posting describes. As the lead engineer (through my company, as the contracting entity) on a multi-tenant AI agent platform for a German AI SaaS company, I built the Python/FastAPI backend for dynamic agents — tool registries, tenant-safe execution — and was the top contributor (~45%) across both core repositories.

Practical note. I hold EU citizenship and am based in Berlin. I'm open to full-time, contract, or freelance arrangements — whatever fits how you're structuring the hire.

I'd welcome the chance to learn more about the team behind OneTablet and how far along the MCP/agent infrastructure is today, and to talk through the architecture in more depth.

Best regards,

Mykhailo Kapustin
